

LEAR UI PUSH AND FORK CHANGE REPORT

Repository: Lear-backend-Avi **Branch:** arena/01a0ee2a-lear-backend-avi **Latest commit:** 965d895

This report tells a reviewer exactly what was pushed to the fork, where the changes live, what each area contains, and what verification was performed.

Push / fork report	Location	Purpose	Status
Latest pushed branch	GitHub fork: arena/01a0ee2a-lear-backend-avi	All implementation and report commits.	Pushed
Latest commit	965d895	Expanded shared primitive interaction coverage and accessibility test coverage.	Verified
U-01 foundation	desktop/src/design-tokens.css	Brand tokens, spacing, type, elevation, motion and layers.	Preserved
U-02 sidebar	desktop/src/components/Sidebar.tsx	Collapse, keyboard navigation, active state and reduced motion.	Implemented
U-03 dashboard	desktop/src/components/dashboard/KPIStrip.tsx and Dashboard.tsx	KPI extraction, loading behavior, live prop contract and tests.	Implemented core
U-04 primitives	desktop/src/components/ui/	Button, Card, Badge, Input, Modal, Dropdown, Tooltip, Skeleton, EmptyState.	Implemented
Preview	desktop/src/components/ui/Preview.tsx	Development-only primitive style lab at /preview.	Implemented
Chat	desktop/src/components/Chatbot.tsx and index.css	Operational command-console visual layer.	Implemented
Audio boundary	tasks/week1/ui/audio/README.md	Safe policy before licensed assets.	Documented
Progress files	tasks/week1/ui/	Markdown and PDF reviewer records.	Pushed

Verification

Frontend build passed. 22 frontend tests passed across 4 test files. git diff --check passed. Feature branch push passed. No secrets, node_modules, build output, caches or audio binaries were committed.

Limits record

Motion was kept purposeful, reusable and reduced-motion safe. No literal 900+ effect flood or 200+ sound bundle was added because that would violate performance, accessibility, licensing and maintainability constraints. Audio architecture is documented but assets remain at zero until approved.
