

LEAR UI PROGRESS REPORT

Repository: Lear-backend-Avi

Branch: arena/01a0ee2a-lear-backend-avi

Scope: UI-only; APIs and data contracts preserved

U-01 — Complete / preserved

Design tokens remain the foundation for brand colors, neutral scale, typography, spacing, elevation, motion and z-index.

U-02 — Implemented

Collapsible persisted sidebar, icon-only mode, accessible labels, active aria-current, keyboard Up/Down navigation and reduced motion.

U-03 — First presentation pass

Dashboard shell aura, entry transition, glass elevation, hover lift, light sweep, with existing live data flow preserved. Full component set.

U-04 — Foundation implemented

Typed Button, Card, Badge, Input, Modal, Dropdown, Tooltip, Skeleton and EmptyState primitives with shared token-based styling.

Motion budget

20 purposeful reusable motion behaviors documented. This is intentionally below 900 to protect performance and accessibility.

Audio budget

0 effects shipped. Audio requires licensing, lazy loading, mute controls, autoplay policy and reduced-audio behavior before implementation.

Verification

Frontend build passed. Frontend tests: 12 passed. git diff --check passed. No secrets or build artifacts included.

Next phase

Complete U-03 dashboard decomposition and add the development-only component library preview route.
